EXTERNAL PNEUMATIC COMPRESSION THERAPY

- ◆ Promotes healing of diabetic and non-diabetic foot and leg ulcers
- ◆ Aids in increased pain-free walking distance

The device acquired by DLSUMC is the first and only external pneumatic compression device optimized for improving blood flow to the arteries of the lower extremities. This device delivers intermittent 120 mm Hg pressure compressions, which are designed to increase collateral circulation in the affected limb.

- ✓ Therapy lasts for at least an hour*
- ✓ No known adverse reactions
- ✓ No special preparations needed

**Depending on patient's case and clinician's assessment*
