MUSCULOSKELETAL SHOCKWAVE THERAPY

SCAN TO INQUIRE
ABOUT OUR SERVICES

What is Musculoskeletal Shockwave Therapy?

Shockwave Therapy is a new non-invasive solution for chronic musculoskeletal pain. Applications are mostly associated with the treatment of chronic muscular and tendon disorders, back pain and cervical pain.

Most common indications:

- Painful shoulder (calcification, tendonitis, impingement syndrome)
- Heel spur, plantar fasciitis
- Radial/Ulnar epicondylitis
- Achillodynia
- Low back pain
- Achilles tendon pain
- Tendonitis
- Trigger points
- Bursitis
- Pain in hamstring insertions

Benefits:

- Fast and permanent relief from pain (analgesic effect elimination of pain)
- Acceleration of healing
- Mobility restoration
